- Pre or Post fader settings are correctly applied after a restart

Firmware Release: 83956 (Sep 2017)

Changes:

- Support for upto 8TB drives.

- Maximum multitrack songs increased to 200.

- Handling of upto 32 Midi Tracks.

Fixes

- Clicks when coming back from Menu or browser.

- Midi Data incorrectly sent out if midi offset is negative

Firmware Release: 83934 (Sep 2016)

Changes:

- Stereo Mixer for stereo songs. The stereo songs are played out on Left and Right channels of the headphone output.

- Midi note offs are sent on pause and all notes off on stopping the song

- Display update problem when disconnecting and and connecting to MAC is fixed.

Firmware Release: 83926 (Oct 2015)

New Features

- Start playback from an offset. Use the skip forward and skip backward button to change the playback offset position. Hit the play button to start playback from the offset.

- Line output levels of LP-16 can be chosen to be either pre fader or post fader. Choose pre-fader when you do not want the songs mixer fader settings to affect your line outputs.

- Preloading of songs for instant play is displayed on the screen. A small pop-up appears on the screen when the preloading is taking place.

- Active playing song in stereo mode is indicated with a play icon against it.

- Some icons and button related features have changed. Please refer to the latest user manual for details.

Fixes

- Streaming problems in OSX. Fixed the problem of unreliable streaming in OSX which would occur after a certain period of time or after a sample rate change.

- Fixed playback of MIDI files exported from some DAW's that tend to use running status even after SysEx or Meta events are sent.

- Continuous restart at start-up when a footswitch is connected.

- uTool release 1.1.46 fixes the problem with playback of a song which has audio and midi files of different length.

Changes in version 83859 (Dec 2014)

- Hidden files created on the USB mass storage device when copying wave files using a Mac are now ignored by the LP-16 when playing back

- Optimized Midi file playback to prevent audio clicks when playing back 'heavy' Midi files alongside multitrack audio.
