Cymatic Audio Live Recorder LR-16 Firmware

Please refer to the Cymatic Audio Website (www.cymaticaudio.com) for instructions on how to update the LR-16 firmware.

New Features

- **Release Build 83859 (December 2014)**
 - Formatting USB mass storage devices now creates 64K clusters which reduces the possibility of dropouts in slow drives.
 - FAT32 file system access optimized to improve performance with USB mass storage devices that have “free space fragmentation”. USB drive testing at start-up replaced by free-cluster-scanning.
 - Sample width is now automatically changed to 16bit when USB flash drive is used for recording. Setting can be overwritten by user.

Maintenance Items

- **Release Build 83859 (December 2014)**
 - Hidden files created on the USB mass storage device when copying wave files using a Mac are now ignored by the LR-16 when playing back
 - Fixed problem with some hard drives not being detected due to slow hard drive spin-up
